
Making a new Layout

Posted by Loopy - 2008/11/28 22:15

Good day! Thank you, this is a wonderful program, and yes I have found the "other stuff", and suppose I might add my own .bmp files, in addition. However, how may I make a new background, with new buildings and trees, and turn it into a Layout file (.tci?), to use?

Hello! Never mind, folks, at last my eyes began to work, and I found the answer in the most obvious place: the Help file, way over on the right side of the screen. I just drew a background with buildings, saved it as a .bmp file in the CATrain directory, and started a layout with the same name (but with .tci file-extension), and found the "specific" background I'd draw, and all is well.

Hello Loopy,
nice to see, that the help file is used :-)
Kind Regards,
Daniel
