Hi everyone,

CATrain 2.2.2 could be downloaded now.

Version 2.2.2 - March 2008

This version is especially interesting for people using CATrain to control a real layout.

### Fixed Bugs

- Some traffic issues have been fixed and the "dead-lock" management has been improved in the "Enhanced traffic control" mode.
- The module configuration tool "ModParam.exe" has been improved to display a large window, when many modules are connected and the original 640x480 pixels window is not enough.
